

Statistical Methods (PSY 3000/3005 Section 1)

Fall 2011, Aug. 22 – Dec. 16

Prof. Robert Carlson

Class Information

Contact Information

Lecture Days: Tues. & Thur.
Lecture Time: 9:00 – 10:15
Lecture Location: McDonald 104
Lab Days: Thur.
Lab Time: 10:30 – 12:15
Lab Location: McDonald 111

Office: McDonald 201
Phone: 652-7893
E-mail: rcarlson@dixie.edu

Disclaimer: Details of this syllabus are subject to change.

Course Summary: The purpose of this course is to introduce Psychology majors to the use of statistics within the behavioral sciences. Students will learn how to apply statistical principles in a variety of research contexts within the behavioral sciences. This course should prepare students to succeed in a Psychology Research Methods course.

Course Information:

Textbook: *Fundamental Statistics for the Behavioral Sciences*, 6th Edition, by David C. Howell

Study Guide: Online study guide (as of now, incomplete) provided for your convenience

Office Hours: Mon., Wed., Fri., 11:00-11:50; Tue., 10:20-11:50

Attendance Policy: Students are expected to attend every class (lecture and lab) and participate in class discussions. There is a lot of material to learn in this course, and it is not easily learned in the abstract; it is vital for students to actively participate in learning the material, through class discussions and actively completing laboratory assignments. If you are going to perform well in this class, you must plan on staying on top of the work every week of the semester.

Classroom Policy: This is a relatively small class, and all students are expected to participate in classroom discussions. This material is best learned through active participation and application. Combined with the lab, this will be a hands-on course.

Academic Honesty: It is extremely important that students present their own work for grading in this course. I cannot accurately evaluate how much you have learned if you are turning in someone else's work. Although collaboration among students regarding the general approach to completing assignments is encouraged, the specific work that is submitted must reflect an individual student's own work, including your own wording of lab assignment answers.

Grading Information: Final grades in this course will be based on a percentage-based system, and there will **not** be a "curve" used to determine grades.

Grade Components: Quizzes (10%), Lab Assignments (25%), Midterm Exams (40%), Final Exam (25%).

Quizzes. Quizzes may be given each class period; if there is a quiz, it will usually be given at the beginning of class. Each quiz will be a short test of your knowledge of that class's reading assignment. In-class quizzes will typically be very short and can be completed in less than five minutes. Other quizzes will need to be

<u>Grading Scale</u>	
<u>Grade</u>	<u>Range</u>
A	>91%
A-	89-91%
B+	86-88%
B	82-85%
B-	79-81%
C+	76-78%
C	72-75%
C-	69-71%
D+	66-68%
D	62-65%
D-	59-61%
F	<59%

completed outside of class. These quizzes must be completed independently; **do not copy another student's work.**

Lab Assignments. Lab assignments will be available **every week**. Each assignment will be introduced in lab, including an elaboration of the material that was discussed in class which will be relevant for the assignment. There will always be time available during lab to work on that assignment. The average percentage score of each lab assignment (**not** total lab points) will count toward 25% of your course grade. See the Lab Guide for more information about lab.

Midterms. Midterms will test your knowledge of an entire section of the course. Midterm test questions will involve true/false and multiple choice questions, as well as questions that will require students to demonstrate their ability to apply the statistical principles learned in class. There will be three midterm exams during the semester; the lowest of the three midterms will count less toward your final grade. Specifically, your two highest midterm scores will each contribute 15% toward your final grade, and your lowest midterm score will contribute 10% toward your final grade. All midterm exams will be administered during class time, according to the schedule below.

Final Exam. The final exam will be administered at the end of the semester and will cover material from the entire course. It will be equivalent to a longer midterm exam.

Grade Calculation: Grades are calculated based on percentages, **not total points**. For example, if you score 9 out of 10 on one lab assignment, that counts as a grade of 90%; if you score 70 out of 100 on another lab assignment, that counts as a grade of 70%. If those were your only two lab assignments, your Lab Average would be 80% (the average of 70% and 90%), **not** 72% (79 out of 110 total points). The same principle applies to quizzes and midterm exam grades. Your Quiz Average (QA) will be calculated by averaging the percentage scores from each quiz, and your Lab Average (Lab) will be calculated the same way. Multiply each of your two highest midterm (HM) percentages by .15 and your lowest midterm (LM) percentage by .10. To calculate your overall grade, use the following formula:

$$(QA * .10) + (HM * .15) + (HM * .15) + (LM * .10) + (Lab * .25) + (Final Exam \% * .25)$$

This sum will be your total percentage grade in the course; use this figure to determine your letter grade in the course based on the Grading Scale listed above.

<u>Date</u>	<u>Reading Assignment</u>	<u>Ch:Pages</u>
Tue., Aug. 23	Introduction	1:1-11
Thu., Aug. 25	Basic Concepts	2:16-27
Tue., Aug. 30	Frequency Distributions and Graphs	3:32-52
Thu., Sep. 1	Measures of Central Tendency	4:60-71
Tue., Sep. 6	Basics of Variability	5:75-87
Thu., Sep. 8	Boxplots	5:87-99
Tue., Sep. 13	Normal Distribution and Frequency	6:103-111
Thu., Sep. 15	Standard Normal Distribution and z -Tests	6:111-119
Tue., Sep. 20	Exam 1	Ch. 1-6
Thu., Sep. 22	Sampling Distributions and Null Hypotheses	8:143-154
Tue., Sep. 27	Hypothesis Testing	8:154-167
Thu., Sep. 29	Scatterplots and Correlation	9:171-182

Tue., Oct. 4	Factors that Affect Correlations	9:183-198
Thu., Oct. 6	Linear Regression	10:211-220
Tue., Oct. 11	Regression Predictions	10:220-229, 236-239
Thu., Oct. 13	Fall Break (no class)	---
Tue., Oct. 18	Multiple Regression	11:245-261
Thu., Oct. 20	Residuals and Multiple Regression Examples	11:261-274
Tue., Oct. 25	Exam 2	Ch. 8-11
Thu., Oct. 27	Sampling Distribution of the Mean	12:279-287
Tue., Nov. 1	t -test and Confidence Limits	12:287-299
Thu., Nov. 3	Comparing Two Samples	13:309-320
Tue., Nov. 8	Independent Sample t -tests	14:325-334
Thu., Nov. 10	Heterogeneity of Variance and Examples	14:334-345
Tue., Nov. 15	Career Day (no class)	---
Thu., Nov. 17	ANOVA	16:374-394
Tue., Nov. 22	Post-hoc Tests	16:394-406
Thu., Nov. 24	Thanksgiving Holiday (no class)	---
Tue., Nov. 29	Factorial Designs	17:418-431
Thu., Dec. 1	Leftover Material and Exam 3 Review	---
Tue., Dec. 6	Exam 3	Ch. 12-14, 16-17
Thu., Dec. 8	Final Exam Review	Ch. 1-6, 8-14, 16-17
Thu., Dec. 15	Final Exam, McDonald 104, 8:00-10:00 a.m.	Ch. 1-6, 8-14, 16-17
